Competitive Price Offerings on GE MDS Products

Twin Eagle Support

As in the past, we will continue to support you with Twin Eagle's award winning support and engineering services (see accompanying award article) for all your product purchases. Twin Eagle Consulting not only sells radios but provides a high level of engineering and systems support along with the sale. It is critical for our business and yours that deployed systems not only operate efficiently, but provide advantages in functionality surpassing expectations allowing your business to focus on your business and not your communications system.

Twin Eagle Consulting has experienced strong growth over the last six years. With that growth it provides for new opportunities for our company and more importantly for our customers. We would like to share the benefits of our growth with our customers. **Twin Eagle Consulting is offering competitive pricing for the GE MDS product line.** We are very interested in providing you a quote for your next project. You can contact us at our main office number, (303) 531-4598, or call Jack Hilkey at his direct number, (303) 948-0936.

GE MDS Full Service Partner Sales/Service Award

The displayed award was presented to Twin Eagle Consulting at the annual GE Digital Energy Global Sales Meeting. We were selected as **one of the** top sales and service providers across North America for our superior level of customer service, leadership, support, and engineering. Twin Eagle Consulting is very honored by this award and we will continue to strengthen our customer focus, technology expertise, and leverage our engineering experience for the benefit of our customers.

Tech Tip by Rod Wilkins

Reduce the time in identifying communication issues using "Over-the-Air" radio management tools:

Most radio systems have the ability to manage the far-end radio by either proprietary software or standard emulation applications (Telnet). If your application is failing, the first check you should perform is to verify that a remote communication session can be established with the far-end radio. If you can manage a remote radio, this normally indicates your radio link is operational.

Full Spectrum Backhaul Systems

The GE MDS Intrepid product line offers a complete spectrum of Point-to-Point backhaul systems from 400 MHz to 28 GHz. Bandwidths range from 768 Kbps (channelized voice) to 200 Mbps (Carrier Class High Capacity Links). Twin Eagle Consulting can manage, engineer and implement any part of the system deployment and commission to include a full turn-key solution.

These systems include radios that operate in the licensed and unlicensed bands meeting any field application requirement. For more information on the GE MDS Intrepid product line or solutions, please call (303) 531-4598. We will be happy to discuss your specific needs and review the offerings of this product line.
